

DESIGN: REDESIGN

The name of the coat stand reflects the symmetrical construction arising from the rotation and mirroring of a single wooden part. This design principle provides multiple benefits. It facilitates production and reduces consumption of materials, permits easy assembly and dismantling as well as flat-pack transport. The straight lines of the juxtaposed pyramids dynamically change the appearance of the coat stand, from static symmetry to a dynamic and vibrating form, depending on the angle of viewing.

STRUCTURE	solid wood
FINISH	high quality oil / acrylic lacquer
